

The institution has been a big support for every student and faculty in terms of overall personality development. When the students join for the first time, they are made to feel like home, they get a very warm welcome. The institute is well active in conducting time to time CDE programmes and workshops/ hands on courses of various specialities in the well equipped auditorium and learning center. Along with these, college is equally involved in the extracurricular activities like sports and cultural week for the overall grooming of the students.

Senior Faculty is conducting theory lectures for the students along with the departmental postings for the clinical work. Students are evaluated clinically as well as theoretically by conducting unit tests. Before the final university professional examination, final evaluation is done by conducting a send up examination or pre professional examination.

Being a post graduate institute, Post graduate students focus on the preclinical work for the initial six months. Once, they get their work approved then only they are allowed to enter the clinical areas and work on patients. Patient work starts with proper discussion of the diagnosis and treatment plan with all the faculty members. Patients are treated under the supervision of the faculty. Students are given thesis topics and Library Dissertation Topics and they are expected to make the presentations of their thesis before actually applying it practically. Journal clubs are presented by post graduate students which are actually the topics of recent

advancements in the field of Orthodontics. Meanwhile, their curriculum also involves the presentation of seminars, followed by elaborated discussions on the same topic.

Indian Orthodontic society is actively involved in conducting webinars, conventions and conferences giving a platform to the post graduate students for presentation of their research work in the form of posters, papers and table clinic.
